Meet the Palmer Penguins

Palmer penguins is a very popular dataset in the data science and statistics community. Here, you can see the distribution of three species: Adélie, Chinstrap, and Gentoo. with respect to two variables: Bill Length and Flipper Lenth. The size of each dot represents the body mass. Gentoos seem to be larger than others. Chinstrap tend to have a larger flipper and bill than Adélie; however, they have a similar body size.
